How a card gets to Done

Code

- All code through a pull request; the reviewer approves
- Every experiment has a committed YAML config
- Never commit data, checkpoints or recordings
- Never regenerate splits.csv after Week 1

Communication

- Daily async update: done / doing / blocked
- Weekly review, Friday, 1 hour
- Blocked? Comment on the card and @Charis
- Unfinished card moves on with a reason

Risks and what we drop first

Risk	Mitigation
No GPU / disk	Confirm by Wed 21 Oct; escalate to lecturer
MediaPipe / Python mismatch	check_env.py on all six machines + GPU
Visual model learns slowly	Pre-train P's visual stream from B2 (W4-05)
Speaker leakage	One splits.csv + disjointness test
Fusion does not beat B1	Diagnose and report it honestly

If we slip, drop in this order

1. Optional extensions
2. Experiments X4–X6
3. Live Mode B (keep Mode A)
4. Extra seeds

Never dropped
Baselines B1–B3 · proposed model P · per-SNR evaluation · ablations X1–X3
